Title : Axial dislocation of a rotor of an electric motor

Periodical : Energetik, no.2, 38, F 1955

Abstract : Answering an inquiry on the subject of axial dislocation of a rotor, the author states that this may happen when:

- 1) the shafts of the rotor and stator are not coaxial,
 - 2) the teeth or pins of the couplings are worn, and
 - 3) the driving mechanism's shaft connected rigidly with the rotor gets out of line but it will never occur because of faulty contact in the rotor circuit.
- Three drawings.

AUTHOR. Rivlin, M. I.
TITLE. Bactericidal properties of the skin (Review of literature)
PERIODICAL Vestnik dermatologii i venerologii, no. 4, 1962, 27-32

TEXT More than 60 years ago Sabouraud indicated that the skin possesses defensive properties against bacteria by virtue of its natural desquamation. Mechnikov assumed that phagocytosis causes destruction of bacteria not only in the dermis but also in the epidermis. It is known that the skin is never sterile. Nikol'sky in 1893 was able to isolate 20 strains of bacteria from the skin and Vigura in 1895 found quantitative differences in bacteria present in various areas of the body surface. Preiss distinguished two groups of skin flora: (1) Residents which are permanently present in the skin and cannot be removed completely by sterilisation measures. This group includes staphylococci, hemolytic streptococci and diphtheria bacillus. (2) Transients — which gain entry from the exterior or from mucous membranes and are easily removed from the skin. This group includes many bacteria both parasitic and saprophytic. Montgomery demonstrated that the skin of diabetic patients possesses weakened bactericidal properties. Arnold et al. pointed out the rapid disappearance of bacteria from the skin. They called this "autodisinfection" and considered this a specific property of the skin. Other workers held that the skin does not possess such specific properties but that the bacteria are destroyed following drying of the skin. They proved these assertions by comparative trials on bacterial death in the

Card 1/2

Bactericidal properties of.

S/206/62/000/004/001/001
1009/1215

skin of various animals and on glass slides. Most investigators have concluded that bacterial destruction depends not on the skin's antibacterial properties but on non specific exogenous factors. Marchionni related bacterial death in the acid reaction of the skin. This assumption was confirmed by other workers Pervushina established that the bactericidal properties of the skin were more marked against less common forms of bacteria. The author points out the various opinions about the bacterial mechanism of the skin and recommends further studies. There are 62 references.

AUTHORS: Pomerants, I.I. and Rivlina, A.I., Engineers

TITLE: Corrosion-testing in Simulated Tropical Climatic Conditions (Korrozionnyye ispytaniya, imitiruyushchiye usloviya tropicheskogo klimata)

PERIODICAL: Vestnik Elektropromyshlennosti, 1958, Nr 6, pp 62 - 65 (USSR).

ABSTRACT: Deliveries of electrical equipment to tropical countries have given rise to a number of problems and this article describes work that has been done at the Kharkov Electro-mechanical Works on tropical finishes for indoor equipment. The tests were carried out in a humidity cabinet with 95 - 98% relative humidity at 43 - 47 °C. The most severe conditions were imposed when the parts were maintained in the chamber for 7 days, then left under normal ambient conditions for 6 hours and then returned for a further 7 days in the humidity cabinet. The other test conditions that were used are also described. Smooth plated surfaces, for example, cadmium, were much better than rough ones; this factor is of even more importance than thickness of plating. It is proposed that the technical conditions for plating should include a number of categories of surface, ranging from cast

Card 1/3

110-58 -6-16/22

Corrosion-testing in Simulated Tropical Climatic Conditions

and unworked to ground and polished; also, the surface condition should govern the kind and thickness of plating. Some, but not all, kinds of stainless steel are liable to corrode if the surface is rough and electro-polishing is recommended for such materials.

The formulation of the chromate passivating-solution affected the corrosion resistance of cadmium plating, the best solution being 25 g sodium dichromate, 20 g sodium sulphate and 20 ml nitric acid of s.g. 1.85. It was found beneficial to cover cadmium and zinc plating with lacquer or mineral oil. If flexible copper leads were plated with sufficient copper, silver or nickel to give protection, they became stiff. Passivation with chromium anhydride was useful but the best solution would be to plate the individual strands before laying-up. Cadmium-plated steel parts were not so corrosion-resistant as stainless steel Kh18N9T and were also

Card 2/3

110-SS-6-16/22

Corrosion-testing in Simulated Tropical climatic Conditions

inferior to copper or copper-alloy parts plated with nickel, tin or chromium. On the basis of the above findings a number of recommendations are made about plating and surface finish.

TITLE: Magnetic survey in the vicinity of the Avachinskaya group of volcanos in Kamchatka
PERIODICAL: Referativnyy zhurnal, Geofizika, no. 9, 1962, 37, abstract 9A247 (Geologiya i geofizika, no. 2, 1962, 101-108)

TEXT: A magnetic survey, which included airborne (ΔT) and ground (Δz) magnetic observations, was made in 1959-1960 near the Avachinskaya group of volcanos. The procedure is described, and the results of the airborne and ground magnetic surveys are analyzed in detail. The authors also give a map of the ΔT graphs for the area of the Avachinskaya group of volcanos, a picture of the anomalous field above the meridional fault near the Karymskiy Volcano, and the Δz isodynamic lines on the Avachinskaya Volcano's active cone. Conclusions are drawn regarding the study area's geologic-tectonic structure. /Abstracter's note: Complete translation.7

ABSTRACT: Let S be a lattice that satisfied specified conditions 1 and 2.
Let $+$ and $-$ be binary operations defined on S and satisfying
specified conditions 3-11. Let A be any sublattice of S closed
under the operations $+$ and $-$. It will be supposed that for each
 $a \in S$ there exist $b, c \in A$ such that $b \leq a \leq c$. Let J_0 be any
finite real-valued function on A which satisfies the specified
conditions (I) - (V). The following theorem is proved: Let N
be the smallest σ -complete sublattice over A . Then there exists
an extension on N of the function J_0 (denoted by J) which satis-
fies specified conditions (I), (II) and (VI). The theorem on the extension of
the measure and the theorem on the extension of the integral are immediate corol-
laries of this theorem. Orig. art. has: 2 formulas. [Based on author's Eng.

TITLE: Note on the ¹⁶sets that are regular under any Caratheodory outer measure

SOURCE: Matematicko-fyzikalny casopis, no. 3, 1965, 200-205

TOPIC TAGS: mathematic space, measure theory

ABSTRACT: A subset E of a metric space X is called absolutely measurable if it is measurable under any Caratheodory outer measure. It has been proved previously, under certain assumptions about X, that each absolutely measurable set E is regular under any Caratheodory outer measure m (e.g. $m(E) = \text{l.u.b. } \{m(G) : G \supset E, G \text{ open}\} = \text{g.l.b. } \{m(F) : F \subset E, F \text{ closed}\}$). In this article an analogous theorem for Caratheodory outer measures is proved in any locally compact Hausdorff space. An immediate corollary of this theorem is the well known statement that each Baire measure is regular. [Based on author's Eng. abstract] [JPRS]

SUB CODE: 20

ABSTRACT: A discussion of the piezoelectric properties of ceramic specimens of the ferroelectric $\text{Na}_{0.5}\text{Bi}_{4.5}\text{Ti}_4\text{O}_{15}$. It is shown that samples of this composition have stable piezoelectric properties over a wide temperature range. The piezoelectric properties are retained over 500°C. A calculation formula is presented for determining the difference in resonant and anti-resonant frequencies of the piezo-resonator in case of low mechanical Q-factor. These piezoceramics practically do not age. The authors thank V. Ya. Fritsberg for his interest in the work and D. A. Dzalbe for synthesizing the samples. Orig. art. has: 3 figures and 5 formulas. TITLE: On the asymptotic representation of certain integrals, which are functions of a large parameter

PERIODICAL: Referativnyy zhurnal, Matematika, no. 2, 1963, 3 - 4, abstract 2B12 (Uch. Zap. Latv. un-t, 1961, v. 41, 5 - 23; summary in Latvian)

TEXT: We cite some of the theorems established. Theorem 1. Let

$$\Omega_1(x) = \int_0^{\infty} \Phi(xt) \varphi(t) dt.$$

Assume that the integral $v(\alpha) = \int_0^{\infty} t^{\alpha} \Phi(t) dt$ converges absolutely for all $\alpha \geq 0$, and $\varphi(t)$ satisfies the conditions: a) For $t \rightarrow 0$ $\varphi(t) \sim \sum_{k=0}^{\infty} a_k t^{\lambda_k}$, $\lambda_0 \geq 0$, $\lambda_{k+1} > \lambda_k \rightarrow \infty$.

Card 1/4

S/044/63/000/002/003/050
A060/A126

On the asymptotic representation of certain

b) In every finite interval $\varphi(t)$ is bounded and integrable, and as $t \rightarrow \infty$.
 $\varphi(t) = O(t^{-\omega})$, $\omega \geq 0$. Then for $x \rightarrow \infty$

$$\Omega_1(x) \sim \sum_{k=0}^{\infty} \frac{a_k \gamma(\lambda_k)}{x^{\lambda_k+1}} \quad (1)$$

To the above integral it is possible to reduce the investigation of an integral of a more general form. Further, the author considers the case when the integral $\gamma(\alpha)$ starting with some α diverges, and $\Phi(t)$ has an oscillatory character. The following lemmata are demonstrated: A. For the function

$$F(t) = \int_0^t \Phi(\tau) d\tau$$

let there exist an $M > 0$ such that $|F(t)| < M$ for all $t \geq 0$, and $f(t) = f_1(t) - f_2(t)$, where $f_1(t)$ and $f_2(t)$ are monotonic non-increasing functions, and $f_1 \rightarrow 0$, $f_2 \rightarrow 0$ as $t \rightarrow \infty$. Then 1)

$$\int_0^{\infty} \Phi(xt) f(t) dt$$

Card 2/4

S/044/63/000/002/003/050
A060/A126

On the asymptotic representation of certain

converges for all $x \geq x_0 \geq 0$ and 2)

$$\int_0^{\infty} \Phi(xt) f(t) dt = o(1/x) \text{ at } x \rightarrow \infty.$$

B. Let the function $\Phi(t)$ be bounded in $[T, \infty]$ and absolutely integrable in every finite interval $[0, \omega]$. Let the function $\Phi_2(t) = \int_0^t \Phi(t) dt$ possess the same property, and $f(t)$ and $f'(t)$ are bounded and integrable in every finite interval. Here $f(t) = o(1)$ and $f'(t) = o(1/t^{1+\epsilon})$ as $t \rightarrow \infty$, where $0 < \epsilon < 1$. Then 1)

$$\int_0^{\infty} \Phi(xt) f(t) dt$$

converges; 2)

$$\int_0^{\infty} \Phi(xt) f(t) dt = o(1/x^{1-\epsilon})$$

as $x \rightarrow \infty$. C. Let the integral $\int_0^{\infty} \Phi(\tau) d\tau$ and $\Phi(\tau) \rightarrow 0$ as $\tau \rightarrow \infty$

Card 3/4

On the asymptotic representation of certain

S/044/63/000/002/003/050

exist, and $f(t) = f_1(t) - f_2(t)$, where $f_1(t)$ and $f_2(t)$ are monotonic non-increasing functions tending to finite limits as $t \rightarrow \infty$. Then the statements of lemma A are true. Theorem 4: Let: 1) the functions $\Phi(t)$ and $f(t)$ satisfy the conditions of one of the lemmata A, B, C; 2) there exist functions $\Phi_2, \dots, \Phi_{n+1}$ bounded in $[0, \infty]$, where $\Phi_k = \int \Phi_{k-1}(\tau) d\tau$, $\Phi_1 = \Phi$, such that $\Phi_k(t)$ and $f^{(k-1)}(t)$ satisfy for $2 \leq k \leq n+1$ the same conditions and 3) $f(0) = f'(0) = \dots = f^{(n-1)}(0) = 0$. Then

$$\int_0^{\infty} \Phi(xt) f(t) dt = o(1/x^n).$$

TITLE: On raising the precision of calculations involving asymptotic series by the method of series transformation

PERIODICAL: Referativnyy zhurnal, Matematika, no. 2, 1963, 7 - 8, abstract 2B31 (Uch. zap. Latv. un-t, 1961, v. 41, 107 - 124; summary in Latvian)

TEXT: From the theorems established we shall note, for example, the following: Theorem 1. If in the sector $\varphi_1 \leq \arg z \leq \varphi_2$ for $|z| \geq x_0 > 0$

$$f(z) \sim \sum_{k=0}^{\infty} \frac{a_k}{z^k}, \quad g_l(z) \sim \sum_{k=l}^{\infty} \frac{b_{lk}}{z^k}.$$

where $a_k = \sum_{i=0}^k b_{ik}$, then for every natural n for $\varphi_1 \leq \arg z \leq \varphi_2$

$$f(z) \sim \sum_{l=0}^{\infty} g_l(z).$$

Card 1/5

S/044/63/000/002/004/050
A060/A126

On raising the precision of calculations

Theorem 4. If for $\varphi_1 \leq \arg z \leq \varphi_2$ $f(z) \sim \sum_{k=0}^{\infty} a_k/z^k$,

where $a_k = c_k d_k$ ($c_k \neq 0$),

then, setting

$$\delta_k = \sum_{l=0}^k (-1)^l \binom{k}{l} d_l = (-1)^k \Delta^k d_0, \quad \beta_{lk} = \binom{k}{l} c_k$$

and assuming that

$$G_l(z) \sim \sum_{k=l}^{\infty} \beta_{lk}/z^k,$$

we obtain

$$f(z) \sim \sum_{l=0}^{\infty} (-1)^l \delta_l G_l(z).$$

Theorem 5. Let $f(z) \sim \sum_{k=0}^{\infty} a_k/z^k$ for $\varphi_1 \leq \arg z \leq \varphi_2$ and let a system of functions $h_n(z) = O(1/z^n)$, $h_0(z) \equiv 1$ be chosen, where

$$1/z^k \sim \sum_{l=k}^{\infty} b_{lk} h_l(z).$$

Card 2/5

S/044/63/000/002/004/050
A060/A126

On raising the precision of calculations

Then

$$f(z) \sim \sum_{l=0}^{\infty} c_l h_l(z),$$

where

$$c_0 = a_0, \quad c_l = \sum_{k=1}^l a_k b_{lk}.$$

If in theorem 4 one sets $a_k = (-1)^k$, then one obtains

$$G_l(z) = \frac{(-1)^l}{(1+z)^{l+1}} \quad \text{and} \quad f(z) \sim z \sum_{l=0}^{\infty} \frac{\delta_l}{(1+z)^{l+1}}$$

(Euler's transformation).. If in theorem 5 one sets $h_l(z) = \frac{1}{z(z+1)\dots(z+l-1)}$, then one obtains Stirling's transformation, and $b_{lk} = S_{l-k, l-1}$, where S_{lk} are Stirling numbers of the first kind, defined by the formula

$$a(a+1)\dots(a+n-1) = a^n + S_{1n}a^{n-1} + S_{2n}a^{n-2} + \dots + S_{n-1,n}a.$$

For $a_k = (-1)^k \bar{a}_k$ we have

Card 3/5

S/044/63/000/002/004/050
A060/A126

On raising the precision of calculations

$$f(z) \sim \bar{a}_0 - \frac{\bar{a}_1}{z} + \sum_{l=2}^{\infty} \frac{c_l}{z(z+1)\dots(z+l-1)}$$

$$c_l = \sum_{k=2}^l (-1)^k \bar{a}_k S_{l-k, l-1} \quad (1)$$

The series (1) is called a factorial series. As an example the author cites the function

$$\Omega(z, \alpha) = z \int_0^{\infty} \frac{e^{-tz} dt}{(1+t)^\alpha}$$

for which we obtain

$$\Omega(z, \alpha) \sim \sum_{k=0}^{n-1} \frac{(-1)^k (\alpha)_k}{z^k} + \frac{(-1)^n (\alpha)_n}{z^n} \sum_{k=0}^{\infty} \frac{1}{z^k} G_k \left(\frac{\alpha+n}{z} \right) \quad (2)$$

where $(\alpha)_n = \alpha(\alpha+1) \dots (\alpha+n-1)$. Setting

$$z = \nu e^{i\theta} = \nu/\beta, \quad \nu = \alpha + n + h, \quad (\alpha+n)/z = \beta - h\beta/\nu,$$

we obtain

Card 4/5

On raising the precision of calculations

3/044/63/000/002/004/050
A060/A126

$$\sum_{k=0}^{\infty} \frac{1}{z^k} G_k \left(\frac{\alpha + n}{z} \right) = \varphi_0(\beta) + \frac{\varphi_1(\beta, h)}{v} + \frac{\varphi_2(\beta, h)}{v^2} + \frac{\varphi_3(\beta, h)}{v^3} + \dots \quad (3)$$

(the Airy expansion). The formulae for the φ_k are cited. The Airy expansion (3) is not asymptotic since for a given n , $\lim_{h \rightarrow \infty} h = \infty$. When $|h| < 1$ one should take the remainder of the series at the smallest term. For $|h| > 1$ one should use instead of (3) the direct expansion (2) which is also more convenient in practice. For example, for $z = 1$, $\alpha = 2$ we have

$$\Omega(1, 2) = \int_0^{\infty} \frac{e^{-t} dt}{(1+t)^2} = 0.4036526377\dots$$

If one applies formula (2) with $n = 8$, taking 27 terms in the second sum, we shall obtain $\Omega(1, 2) = 0.4036526357$. Certain other expansions are also considered.

TITLE: Transformation of asymptotic series by the method of differential equations

PERIODICAL: Referativnyy zhurnal, Matematika, no. 2, 1963, 8, abstract 2B32
(Uch. zap. Latv. un-t, 1961, v. 41, 125 - 137; summary in Latvian)TEXT: In the sector $\sigma: |\arg z| < \pi/2 - \eta$, $0 < \eta < \pi/2$, for $|z| > \geq R_0 > 0$ the authors consider the differential equation

$$L(y) = y'' - p(z)y' + q(z)y = f(z), \quad (1)$$

where $p(z)$, $q(z)$, and $f(z)$ are analytic in σ and as $z \rightarrow \infty$

$$p(z) \sim \sum_{k=0}^{\infty} \frac{a_k}{z^k}, \quad q(z) \sim \sum_{k=1}^{\infty} \frac{b_k}{z^k}, \quad f(z) \sim \sum_{k=-m+1}^{\infty} \frac{c_k}{z^k}$$

$a_0 \neq 0$, $c_{m+1} \neq 0$. Let $a_0 = 1$. The following theorem is demonstrated. Theorem 1. Equation (1) in the sector σ has a unique solution $y(z)$ satisfying

Card 1/4

S/044/63/000/002/005/050

Transformation of asymptotic series by the method A060/A126

the condition

$$\lim_{k \rightarrow \infty} z^m y(z) = \frac{c_{m+1}}{m+b_1}, \quad c_{m+1} \neq 0,$$

where

$$y \sim \sum_{k=m}^{\infty} d_k / z^k, \quad (2)$$

$$d_m = \frac{c_{m+1}}{m+b_1}; \quad d_k = \frac{1}{b+k} \left[c_{k-1} - k(k-1)d_{k-1} - \sum_{i=m}^{k-1} d_i a_{k-1-i} - \sum_{i=m}^{k-1} d_i b_{k+1-i} \right], \quad k = m+1, m+2, \dots$$

Together with (2) the authors consider the expression

$$y = \sum_{k=0}^{n-1} \frac{d_k}{z^k} + \frac{d_n}{z^n} H_n(z), \quad d_n \neq 0. \quad (3)$$

Substituting expression (3) in equation (1) we obtain for $H_n(z)$ the differential equation

$$H_n'' - P_n(z) H_n' + Q_n(z) H_n = F_n(z). \quad (4)$$

Into equation (4) it is possible to introduce the auxiliary function $x = x(z)$ and seek a formal expansion $H_n(z)$ in the form

Card 2/4

S/044/63/000/002/005/050

Transformation of asymptotic series by the method A060/A126

$$H_n(z) \sim \sum_{k=0}^{\infty} \frac{g_k(z)}{z^k} \quad (5)$$

Theorem 2. Let the functions $g_k(x)$ in the sector σ be analytic functions and have the expansions

$$g_k(x) \sim \sum_{j=0}^{\infty} l_{kj}/x^j$$

and be chosen in such a way that the series (5) formally satisfy equation (1). The solution $H_n(z)$ of equation (4) uniquely determined, according to Theorem 1, by the conditions

$$\lim_{n \rightarrow \infty} H_n(z) = 1, \quad H_n(z) \sim \frac{1}{d_n} \sum_{k=0}^{\infty} \frac{d_{n+k}}{z^k}$$

may then, for any natural m be represented in the form

$$H_n(z) = \sum_{k=0}^{m-1} \frac{g_k(z)}{z^k} + O\left(\frac{1}{z^m}\right)$$

Transformation of asymptotic series by the method S/044/63/000/002/005/050
A060/A126

Abstracter's note: Theorem 1 is a special case of D.P. Kostomarov's general theorem (RZhMat, 1956, 65780; 1958, 298).

Title : Clinical Observations of Changes in the Acidity of Gastric Juice in the Prolonged Use of Hypnotics

Orig Pub : Tartu Ulikooli toimetised, Uch. zap, Tartusk. un-ta, 1957, vyp. 52, 172-183

Abstract : In 61 patients affected with diseases of the gastrointestinal tract, treated by medicamentous sleep therapy, the changes of the acidity (A) of gastric juice were determined. Most of the patients (47) suffered from gastric and duodenal ulcers. Veronal, medinal or barbamil were used in doses producing a sustained (12 to 16 hrs.) sleep. In order to obtain gastric juice, in 2/3 of the patients a fractional method of caffeine administration was used, and in 1/3, 8-10 units of insulin were introduced intravenously. As a result

AUTHOR: Riyves. V.

TITLE: Brightness distribution in the comet head

PERIODICAL: Referativnyy zhurnal. Astronomiya i Geodeziya, no. 3, 1961, 63, abstract 3A568 ("Publikatsii Tartusk. astron. observ.", 1960, v. 33, no. 4, 281-288, Engl. summary)

TEXT: Assuming Maxwell distribution of initial speeds v of emitting particles ejected from the nucleus and the constancy of their acceleration, the author derives the formula for surface brightness i at a distance a from the nucleus: $i = a^{-1} \text{const exp}(-p/p_0)$, where p is parameter of parabolic envelope corresponding to velocity v , and p_0 is the same for the probable velocity v_0 . The formula was tested for values of i , a and p known from observations of the comets 1956 h, 1957 d, 1944 V, 1941 I and 1943 I. Fifty one values of p_0 are given for the visible images of the comets, and values of P_0 of the same parameter corrected for projection conditions are calculated. It was found that $P_0 \propto r^{-1.5}$ which could be expected in the case of the thermal motion of molecules. The values of P_0 , deter-
